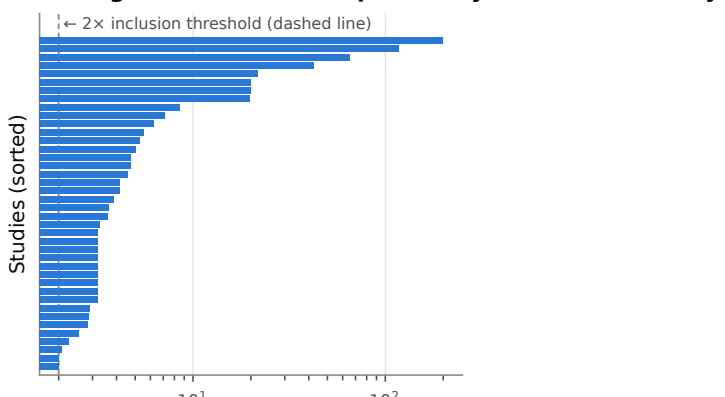
a Studies differ in size and design
≥ 60 choices per person (full H2)
< 60 choices per person (pooled-slope H2)
Median choices per person (log scale)
10^3
10^2
60-choice rule
40 study × subset units, 5,743 people, 338,050 choices
marker area ∝ number of choices
10^2
10^3
People per study (log scale)



b Magnitude varies independently of ratio and delay
← 2× inclusion threshold (dashed line)
Studies (sorted)
10^1
10^2
Reward-magnitude range independent of ratio and delay
(5–95% span of residual log amount; capped at 200×)
